

HC-001

PROJECT PACKAGE / MATERIAL ALLOCATION

GRAVITY FEED CALIBRATION

The operator builds with moving Sand and stationary Walls between two supplied machines: a fixed Input that spawns Sand and a fixed Output that removes it.

APPROVED MATERIALS

ITEM	CONTROL	PRICE	ROLE IN THIS CONTRACT
SD SAND	PLACEABLE	\$1	Moves downward through open space during simulation and forms the delivered material stream.
WL WALL	PLACEABLE	\$1	Remains stationary and redirects falling sand by occupying grid space.
IN INPUT	FIXED	\$0	Sits at the frame's top-left corner, produces Sand for 500 turns, then switches off.
OUT OUTPUT	FIXED	\$0	Sits at the frame's top-right corner, deletes Sand that reaches it, and records output.

Contract limits: Sand and Walls may cost at most \$30 and the whole machine must fit inside 20 × 20 cells, including fixed Input and Output.
