

HC-001

PROJECT PACKAGE / REQUIREMENTS

GRAVITY FEED CALIBRATION

MAX COST

\$30

MAX SIZE

20 × 20

INPUT / OUTPUT

Fixed

TEST

500 on + 500 off

DIFFICULTY

Orientation

DELIVERY REQUIREMENTS

R01

Begin from the supplied HCW project save. Input is fixed at top left and Output at top right.

R02

Build the route using Sand and Wall blocks without exceeding \$30 or a 20 × 20 bounding rectangle.

R03

Run 500 turns with Input producing Sand, then 500 turns with Input switched off.

R04

Record Sand in, Sand out, elapsed turns, placed blocks, and the smallest rectangle containing every block.

R05

Keep the design in the project save. The trace is evidence of a run, not a replacement for the saved layout.

TEST REPORT

Efficiency = Sand out ÷ Sand in. Speed = Sand out ÷ turns elapsed. Price = the sum of block prices. Size encloses the whole machine, including fixed Input and Output.
