

GRAVITY FEED CALIBRATION

The operator places the whole machine: moving Sand, stationary Walls, one Input that spawns Sand, and one Output that removes it.

APPROVED MATERIALS

ITEM	CONTROL	PRICE	ROLE IN THIS CONTRACT
 SAND	PLACEABLE	\$1	Moves downward through open space during simulation and forms the delivered material stream.
 WALL	PLACEABLE	\$1	Remains stationary and redirects falling sand by occupying grid space.
 INPUT	PLACEABLE	\$0	Produces Sand during the first 500 turns, then switches off for the drain phase.
 OUTPUT	PLACEABLE	\$0	Deletes Sand that reaches it and records the number of removed cells.

Test boundary: run 500 turns with Input on, then 500 with it off. Size encloses every placed block, including Input and Output.
