

HC-001

PROJECT PACKAGE / REQUIREMENTS

GRAVITY FEED CALIBRATION

INPUT	OUTPUT	TEST	DIFFICULTY
Player placed	Player placed	500 on + 500 off	Orientation

DELIVERY REQUIREMENTS

R01

Begin from the supplied empty HCW project save and place exactly one Input and one Output.

R02

Build the route using Sand and Wall blocks from the approved materials sheet.

R03

Run 500 turns with Input producing Sand, then 500 turns with Input switched off.

R04

Record Sand in, Sand out, elapsed turns, placed blocks, and the smallest rectangle containing every block.

R05

Keep the design in the project save. The trace is evidence of a run, not a replacement for the saved layout.

TEST REPORT

Efficiency = Sand out ÷ Sand in. Speed = Sand out ÷ turns elapsed. Price = the sum of block prices.
Size = the area enclosing all placed blocks, including Input and Output.
