**PROJECT PACKAGE / REQUIREMENTS**

# GRAVITY FEED CALIBRATION

| INPUT               | OUTPUT          | DIFFICULTY  |
|---------------------|-----------------|-------------|
| Falling-cell source | Collection port | Orientation |

## DELIVERY REQUIREMENTS

**R01**

Begin from the supplied HCW project save. The fixed source and collection port define the contract geometry.

**R02**

Build the route using only falling cells and fixed cells from the approved materials sheet.

**R03**

Run the simulation so the source produces a visible stream and the collection port receives cells.

**R04**

Keep the design in the project save. The trace is evidence of a run, not a replacement for the saved layout.

### ACCEPTANCE RULE NOT YET ASSIGNED

This package specifies the input, output, materials, and deliverable without inventing a pass threshold. The contract system will attach the final duration and quantity test when that mechanic is defined.
